

## EXP 7 Servlet-based project is to store user preferences

**AIM:**

The goal of this Servlet-based project is to store user preferences (such as theme and language) using cookies and retrieve and display them on subsequent visits.

### ALGORITHM:

Step 1: Load Preferences Page → **Browser checks for existing cookies.**

**Step 2 Retrieve Preferences (GET Request) → Servlet reads cookies and applies saved settings.**

**Step 3: User Selects Preferences → User picks theme and language.**

Step 4: Save Preferences (POST Request) → **JavaScript** sends data to **Servlet**.

**Step 5: Servlet Stores Preferences → Cookies are updated and sent back to the browser.**

Step 6: Preferences Applied on Next Visit → **Browser loads saved settings automatically.**

**PROGRAM:**

## index.html (Frontend - Combined HTML, CSS & JavaScript)
